TRANSFER PIPETTES

The Vent-Hole Punch is a handy palm held device that facilitates creating a hole through sample cups for equalizing pressure differentials. It is designed for placement directly over sample cups integrating central ThermoPlastic™ seals. A simple downward pressure of the knob extends a pointed shaft the correct distance to create a hole. The spring-loaded awl automatically retracts in readiness for additional preparations. Ideally suitable for preparing numerous samples requiring venting.

Usable With the Following Listed XRF Sample Cups

Sample Cup Cat. No.	Sample Cup Cat. No.	Sample Cup Cat. No.
1065	1430	1830
1075	1430 SE	1830 SE
